Serafil

Product Profile

With their fine polyester filaments, Serafil 120/2 and 200/2 are the perfect threads for high-quality overedge seams and for blind stitching work. Due to their extremely fine cross-section and their high tensile strength and abrasion resistance, these threads are ideally suited for all applications requiring high seam quality combined with delicate, silk-like look.

For even finer seams, AMANN offers Serafil 300+, a super fine thread that leaves no seam marks. Thanks to its semi-transparency, it excellently adapts to any colour which can make colour changes unnecessary.

Because of their high thread purity and consistency and because of their perfect finish, Serafil 120/2, 200/2 and 300+ feature excellent sewability, also on automated sewing machines. Other benefits are their light and washability fastness as well as their high running lengths and the wide colour range.

Fields of Application

Serafil 120/2

For the finest overedge seams and blind stitching work. The use of Serafil 120/2 prevents seams leaving a mark on fabric during pressing. In addition, it goes well as a fine upper and lower thread on multi-needle machines for quilts, mattresses and quilted garments. Serafil 120/2 is also suitable for embroidery, especially for filigree details and small letters.

Serafil 200/2

The even finer alternative for filigree overedge seams and high-quality blind stitching work on particularly lightweight fabrics.

Serafil 300+

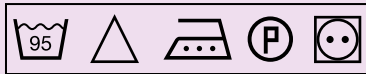

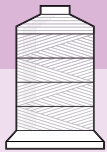

Super fine for high-quality, soft and barely noticeable blind stitch seams.

*Incredibly fine, incredibly tearproof –
delicate but tough*
